

# Covariance Prediction Using Kernel Regression: Supplementary Material

Jussi Klemelä

March 1, 2018

## Abstract

We provide supplementary material for the article “Covariance Prediction Using Kernel Regression”. We compare the predictive performance of kernel predictors to the moving average predictors.

## 1 Evaluation of Covariance Predictors

Panel (a) shows time series  $\text{SSPE}_t(\hat{f}) - \text{SSPE}_t(\hat{f}_{ewma})$  of differences of cumulative sums of squared prediction errors, where  $\hat{f}_{ewma}$  is the exponentially weighted moving average, and  $\hat{f}$  is the kernel predictor (red), the kernel correlation predictor (orange), and the exponentially weighted moving average correlation predictor (blue). Cross-validation is used to choose the smoothing parameters of both predictors.

Panel (b) shows time series  $\text{SSPE}_t(\hat{f})/\text{SSPE}_t(\hat{f}_{ewma})$  of ratios of cumulative sums of squared prediction errors.

Panel (c) shows the time series of the smoothing parameters chosen by the cross-validation for the kernel predictor (red) and the kernel correlation predictor (orange).

Panel (d) shows the time series of the smoothing parameters chosen by the cross-validation for the the exponentially weighted moving average (black) and for the the exponentially weighted moving average correlation predictor (blue).
